THE ELON GAZETTE

Weekday briefing on what Elon Musk is saying and doing

TUESDAY, NOVEMBER 3, 2026

THE MORNING PICTURE

"Around 1.2M Blackwells" at Colossus 2

"There will be a total of around 1.2M Blackwells at Colossus 2 by end of year," Elon Musk posted at 2:21 p.m. EDT Saturday, after a walk around the SpaceXAI site in Memphis and its new campuses in Southaven, Mississippi. Half an hour earlier he laid out the buildings: "Macroharder and Minihard both have 220k GB300s with 800 gig nics configured for training. Gun Range will have the same. Spam (used to house Hormel products) will have ~200k GB300s, but configured for inference, so much simpler networking and less than half the fiber."

Gun Range, a former police and fire training center, sits on 55.9 acres, and Spam is a 53-acre former Hormel warehouse site, DCD reported; Musk said Gun Range is tracking to be operational by the end of November and Spam in December. "It was literally the local police department's gun range that we bought," he wrote. At 6:54 p.m. he added: "Macrohard is 110k GB200 and 220k GB300." On Sunday at 3:32 p.m. EST, quoting a post that called Colossus 2 the world's most powerful AI data center, he wrote: "The other supercompute projects are unable to reach their goals, but SpaceX is already achieving ours."

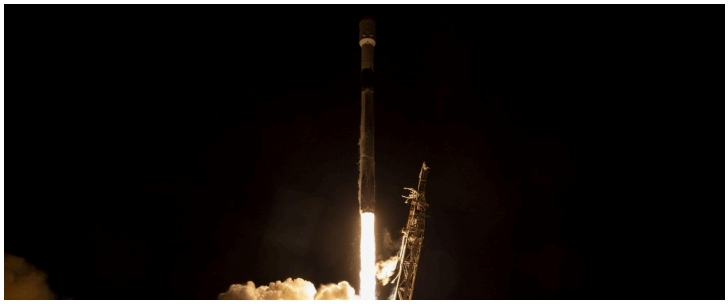

I · SPACEX & STARLINK

"Terrestrial compute will be peanuts"

Musk said orbital compute could pass Earth's by the end of 2028, congratulated the team on 700 Falcon 9 flights, and cheered Gwynne Shotwell's stock gift.

700+	2M+	~1300 W/m²
Falcon 9 flights, per Musk's congratulations	SpaceX shares the Shotwells are giving to children's accounts	radiator output Musk cited for cooling in orbit

"Terrestrial compute will be peanuts compared to orbital compute. Orbital compute deployed per month probably exceeds terrestrial around the end of 2028 and then far exceeds it in 2029," Musk wrote at 10:41 p.m. EDT Friday. On Saturday at 9:42 a.m. he went further: "Launching super intelligence satellites into deep space with a mass driver on the Moon can achieve >>petawatt/year capability, which would far exceed the best case value of Earth's economy."

A Falcon 9 lifts off from Space Launch Complex 4 East at Vandenberg.

"Future super intelligence compute will obviously be overwhelmingly in space. By 'overwhelmingly', I mean that it will round up to 100%!" he posted at 10:08 a.m. EST Monday. When investor Shaun Maguire said he would post "a systems level analysis of orbital compute over the next week or two," Musk replied: "Absolutely."

At 10:43 p.m. Monday he made the case for cooling: "Yeah, much easier to cool in space. ~1300 W/m^2 is easily achievable for an aluminum radiator pointed away from the Sun, as it is mostly just seeing cosmic background radiation at ~3 degrees above absolute zero! Solar panels generate ~250 W/m^2, so you should expect them to have ~5 times the area of the radiator." To a reply that radiative heat transfer "grows gigantically" at high temperatures, he wrote: "Yup, T^4 scales super fast."

Over 700 Falcon 9 flights

"Congrats to the @SpaceX team on over 700 Falcon 9 flights!" Musk posted at 9:32 a.m. EDT Saturday. The quoted post said

Starlink 15-16 marked the 700th mission on Oct. 27.

On Saturday morning he also marked "14 years ago" over a 2012 60 Minutes clip from the SpaceX factory in which he said, "I'm probably not the guy that most people would bet on."

Shotwell's gift of shares

"Cool," Musk wrote with a heart at 6:11 p.m. EDT Friday, quoting SpaceX President Gwynne Shotwell's post: "Robert and I are thrilled that our gift of over 2 million shares of SpaceX stock will be distributed to children's Trump accounts in December!" The first gift goes to 11- to 17-year-olds in zip codes with a median family income of $57,000 or less, she wrote, with a second gift planned for eligible children in military families serving overseas (Reuters).

"Starlink saves lives"

Musk posted the phrase at 8:49 a.m. EST Monday about a Colorado rescue. A 37-year-old solo hiker on the Four Pass Loop texted "Please help me" on Oct. 29, and five Crested Butte Search and Rescue volunteers hiked through the night "carrying a Starlink satellite communication system that allowed them to remain in contact with their mission coordinator," Unofficial Networks reported. A Colorado Army National Guard Black Hawk hoisted her out the next morning.

> **QUICK HIT**
> **Google's haiku from orbit.** "Cool," Musk wrote at 1:08 p.m. EDT Friday, quoting Sundar Pichai's post that Google's Project Suncatcher prototype satellite had booted its TPU, run a prompt and sent back "a haiku!"

II · X, GROK & AI

"Unsustainably high" costs for Grok Bot

Musk explained the tighter Grok Bot usage limits, pitched the agent as a colleague and said SpaceX's capex efficiency is underestimated.

"The cost of serving Grok Bot was unsustainably high relative to revenue," Musk replied at 3:34 p.m. EST Sunday to a user asking for a usage reset after many said "their usage ran out really fast this week." To another who would have to wait until Wednesday, he asked: "Upgrade to higher usage plan cost increase is too high?"

"Try Grok @Bot! You will love it. We land a few dozen fixes, features and sometimes powers to Bot 7 days a week and we look at your feedback to make Bot as perfect as possible," he posted at 6:20 p.m. Sunday. Earlier he wrote that Grok Bot "will research gifts that your friends and family would love and buy them," quoting a user whose agent spent up to $100 from her X Money account on a surprise present.

"A work colleague"

"Think of Grok @Bot as a work colleague," Musk wrote at 7:06 p.m. EDT Friday. On Monday he answered "This is the way" (post) to advice to give the agent "an ambitious task you'd normally give to a new hire," and shared a video of Grok Bot improvements including shopping cards, order tracking, payments and team logins. At 10:48 p.m. he quoted a user who had his Grok Bot phone Progressive about glass coverage while he picked up his children.

To feedback that pinning Grok Bot to the top of the DM inbox was "a little cringie," he replied: "Just unpin it if you don't want it there. We just don't want people to use once and then forget they have it."

ON THE WIRE

Bus money. Larry Page once said he would leave his money to Musk if hit by a bus, Steve Jurvetson recalled in a post Musk quoted.

"Capex efficiency is greatly underestimated"

Musk replied with those words at 6:40 a.m. EST Sunday to a post summarizing investor Kyle Reidhead's view that SpaceX is on track to spend $470 billion on capital expenditure over the next five quarters.

"The people deserve to have their RAM too!"

Musk posted that line at 3:09 p.m. EST Sunday. On Monday he answered "Wow" (post) to a thread saying Tesla FSD now uses 64GB of LPDDR5X memory and that the upcoming AI5 chip will jump to 96GB and AI6 to 144GB. When a post said supermarkets in seven European countries had their refrigeration systems hit by cyberattacks, with some freezer controls set to 50°C, he replied at 8:13 a.m.: "Literally an episode of Silicon Valley."

Reach limits in the open

"You can now find out if any reach limitations have been applied to your account," Musk posted at 6:03 p.m. EDT Friday. X's Under the Hood page now lists posts that got a visibility-limiting label when fewer than 5% of an account's posts carry one (@XOpenSource). On Sunday he wrote "Maximizing for long-term unregretted user seconds" over Similarweb data showing X led major social sites in September with an average visit of 13 minutes and 25 seconds, ahead of Facebook and Instagram.

ON THE WIRE

"Too few understand this." Shaun Maguire said almost all super intelligence compute will be in space; Musk replied "Absolutely."

"Even F1 champions love Tesla self-driving"

Musk shared Tesla's video of racing drivers being driven, pointed to the long-wheelbase Model Y and recommended a Neuralink deep dive.

"Even F1 champions love Tesla self-driving," Musk wrote at 5:55 p.m. EDT Friday, quoting Tesla's post: "Even the world's best drivers like being driven." Earlier that day he posted "Tesla Model Y long wheel base variant" over an owner's video of the Model Y L.

"I have paid far more in taxes than the Tesla loan, which was repaid," he replied at 10:56 p.m. EST Monday. On Saturday he wrote: "Tesla and SpaceX have created meaningful wealth for hundreds of thousands of employees over time and improved the retirement savings of hundreds of millions of people." Tesla shares rose 1.0% to $403.82 on Monday and SpaceX rose 1.2% to $136.37 (Yahoo Finance).

Inside Neuralink with Cleo Abram

"Good video about @Neuralink," Musk posted at 2:54 p.m. EDT Friday, and on Saturday he shared Cleo Abram's full episode as a "Neuralink deep dive." Abram toured the company's Austin headquarters and got a close look at its new R1 surgical robot, which "is to put a computer chip into people's brains," she said (@SawyerMerritt).

ON THE WIRE

Inference, not training. Spam's ~200k GB300s are "configured for inference, so much simpler networking and less than half the fiber," Musk wrote.

"I miss Larry Page"

Musk wrote that at 12:11 p.m. EDT Friday, quoting a post retelling a story from investor Steve Jurvetson: at a Google event, Page said that if he were hit by a bus, he should leave his money to Musk. The two have known each other since around 1997, the post said.

BY THE NUMBERS

1.2M	Blackwells Musk expects at Colossus 2 by year-end (post)
$470B	capex Kyle Reidhead sees SpaceX spending over five quarters (@MilkRoadStocks)
$57,000	median family income cap for the first Shotwell gift (Reuters)

"This will happen again"

Musk wrote that at 3:46 p.m. EDT Saturday, quoting physicist Sabine Hossenfelder's post that the dinosaurs "probably died much faster -- and much more horribly -- than we thought." On Sunday he answered "It is" (post) to a user who wrote that "becoming multiplanetary is a necessity."

QUICK HIT

A family plane. "I was able to buy my grandfather's old Bellanca from a collector and am having it restored to flyable status," Musk wrote on Saturday, replying to a post about his mother Maye's family flying a small propeller plane across continents.

Takeaways

1. Musk said Colossus 2 will have about 1.2 million Blackwells by the end of the year, with Gun Range due by the end of November and Spam in December.
2. He said orbital compute could pass terrestrial compute per month around the end of 2028.
3. Musk congratulated SpaceX on over 700 Falcon 9 flights.
4. Gwynne and Robert Shotwell are giving over 2 million SpaceX shares to children's accounts in December.
5. Musk said serving Grok Bot had cost too much relative to revenue.
6. TSLA rose 1.0% to $403.82 and SPCX 1.2% to $136.37 on Monday.
